

If the FCC allows BPL, and it causes interference, does this not mean that the FCC is violating the Type Accepted mandate that is on every piece of electronic equipment? Also, when BPL causes interference, is this not violating the many international treaties concerning radio broadcasting and receiving that the United States is party of? There are other reasons also, I urge the FCC to NOT implement the BPL system without further research and preparation for enforcement of the law. thks, Wil Loyd
